

Executive Summary & Global Frontend Architecture Guidelines

1. Project Vision & Standard of Excellence

Project: Global VVIP Luxury Travel & Hotel Booking OTA Platform.

- Design Standard: Must strictly reflect the ultra-high-end aesthetic and minimalist UX/UI standards of global luxury brands (e.g., Hermès, Balmain) and premium curation platforms (e.g., Airbnb Luxe).
- Core Philosophy: The frontend is the ultimate touchpoint for our VVIP clients. Perfect typography, generous negative space, and flawless micro-interactions are non-negotiable.

2. Technology Stack Mandate (Strictly Enforced)

- Required Frameworks: React.js, Next.js, or Vue.js.
- Prohibited Tech: The use of heavy, slow CMS builders (e.g., WordPress, Elementor, Wix) is STRICTLY PROHIBITED. The platform must be built from the ground up as a lightweight, lightning-fast custom web application.
- Architecture: Must be a flawless SPA (Single Page Application) ensuring seamless, app-like page transitions without any browser reloading or screen flickering.

3. Agile Deployment Strategy & Timeline

We employ a Silicon Valley-style Agile/MVP (Minimum Viable Product) rollout strategy to maximize speed to market.

- Phase 1 (Target: 2~3 Weeks): Rapid development and deployment of the Main Landing Page and 1~2 Core Categories (e.g., Global Chains).
- Phase 2 (Iterative Rollout): Once Phase 1 is live and API integration is verified, the remaining categories (Honeymoon, Golf, Villas, etc.) will be seamlessly integrated in subsequent sprints.

4. The "Frontend-Only" Advantage

- Backend is 100% Ready: The complex global hotel database, TBO API mapping, server infrastructure, and JSON endpoints are fully managed and deployed by our global backend team in India.
- Your Sole Focus: The frontend team has ZERO backend or database responsibilities. Your singular objective is to fetch the provided JSON APIs and render them into the ultimate luxury UI with Zero-Latency performance, perfect State Management, and sophisticated hover/transition animations.

Page 1. Main Landing Page UI/UX & Flow Guide

1. Rendering Concept (SPA Architecture)

- This project must strictly avoid heavy builders like WordPress or Elementor. It must be built as a Single Page Application (SPA) using modern frameworks like React.js or Vue.js.
- There must be NO page reloading or screen flickering when navigating. Seamless, app-like, and instant page transitions (Routing) are mandatory.

2. Header & Main GNB (Global Navigation Bar)

Perfect 3-Column Symmetrical Header Structure (Hermès Style):

- ① Top-Left: Search Component (Magnifying glass icon + "Search" text + Bottom underline)
- ② Top-Center: Main Brand Logo (Current Hermès position)
- ③ Top-Right: Account (My Page) & Cart (Booking Confirmation)

This must be implemented as an elegant Sticky Header that remains fixed at the top during scrolling with a smooth background transition.

7 Core GNB Menus: Global Chains, Free Travel, Exhibitions, Honeymoon, Golf, Castle, Villas.

Interaction Flow: Upon clicking any GNB menu, the frontend must instantly fetch data from the Backend API and seamlessly render the category-specific UI with zero-latency smooth transitions.

3. Search UI/UX Interaction

- Default State: Only the text and magnifying glass icon are displayed minimally. (The input field must NOT be exposed or expanded by default).
- On-Click State: When the user clicks the search area, the bottom line should smoothly expand to activate the input form, OR a highly elegant Full-screen Search Overlay must smoothly fade in. (Strict application of high-end luxury brand rendering styles is mandatory).

4. Hero Section & Interaction

- Background: A high-resolution Full-Screen image or video loop must be rendered to create a high-end luxury mood.
- Copy & CTA Button: Placement of the main tagline (e.g., "Endless Summer") and a Start the Journey CTA (Call To Action) button at the bottom.
- Interaction Flow: Clicking the CTA button must trigger a smooth scroll-down animation or an instant, seamless transition to the primary hotel search/booking flow.

9	10	11	12	13	14	15
16	17	18	19	20	21	22

Page 2. Global Chains Category - UI/UX & Interaction Guide

1. Balmain-Style Mega Menu Rendering

Hovering over the Global Chains menu in the top GNB must trigger a full-width mega menu that smoothly drops down to cover the screen.

The left section must elegantly display a scrollable list of over 110 multinational hotel brands.

2. Zero-Latency Dynamic Rendering

Action: When the user clicks or hovers over a specific brand (e.g., Aman) from the left list.

Reaction (City List): Without any page reloading, the right section must instantly update to display the list of cities where the selected brand operates.

Reaction (Date Picker UI): Simultaneously, a premium Date Picker UI for selecting check-in/check-out dates must render with a smooth transition animation next to (or below) the city list.

3. Core Frontend Technical Requirements

The core logic of this page requires frontend State Management (Caching) of the brand-specific city data fetched from the Backend API.

As the user navigates through different brands, the right section must update instantly (under 0.1 seconds) with zero server latency using flawless SPA routing.

Page 3. Global Chains - Brand Depth UI/UX & Flow Guide

1. Active State & UI Segmentation for Selected Brand

When a user clicks a specific brand (e.g., Aloft) from the left list, the brand name must be highlighted (e.g., Bolded or color-changed) to clearly indicate its Active State.

The right section of the screen must smoothly render (Fade-in) and divide into two core components: the 'List of Operating Cities' for that brand and the 'Date Picker'.

2. One-Click Booking Flow

Step 1: The user clicks their desired city from the right-side city list (e.g., London).

Step 2: The Date Picker component activates, allowing the user to select their check-in/out dates.

Step 3: Once both the city and dates are selected, a [Search] CTA button must instantly transition to an active/clickable state.

Step 4: Upon clicking the Search button, the frontend must communicate with the Backend API and smoothly route the user to the specific hotel booking/list page.

3. Additional Frontend Technical Guidelines

Custom Date Picker: To maintain the high-end aesthetic, the calendar UI must NOT use default, clunky browser components. The developer must build a Custom Date Picker component that perfectly matches the minimalist mood of the wireframe.

Disabled Dates: All past dates in the calendar must be strictly disabled (unclickable) by default.

Page 4 & 5. Free Travel Category - UI/UX & Data Routing Guide

1. Regional Categorization & Grid Layout

The data must be arranged in a clean, elegant 4-Column Grid Layout. To maintain a high-end aesthetic, strictly apply perfect typography rules (letter spacing, line height) and generous margins/padding.

2. Hover Interaction & Instant 2nd-Depth Rendering

Action: Upon hovering over a specific country (e.g., China) from the continental grid.

Reaction: The screen must transition smoothly to reveal a curated 'Target City List' for that specific country without any screen flickering.

The parent category (e.g., China) must remain visually fixed on the left or top, strictly maintaining its Active State.

3. One-Click SPA Routing

Action: The exact moment a user clicks on their target destination city (e.g., Shanghai).

Reaction: Utilizing flawless SPA routing, a smooth transition animation must instantly display the [Date Picker] component or route the user directly to the [Hotel List Page]

Beijing, Chengdu, Harbin, Hong Kong, Macau, Qingdao, Shanghai, Shenzhen, Xi an,
Zhangjiajie

Page 5. Free Travel - Country Depth & City Listing UI Guide

****1. Instant 2nd-Depth Dynamic Rendering****

* ****Interaction:**** Upon hovering over a specific country (e.g., China) from the continental grid, the screen must transition smoothly to reveal a curated ****'Target City List'**** for that specific country.

* To avoid a cluttered layout, the text (city names) must be rendered following high-end editorial ****Typography**** rules, ensuring generous line height and letter spacing to replicate a luxury magazine aesthetic.

****2. Breadcrumb & Active State Focus****

* To ensure users intuitively recognize their current context, the parent category (e.g., China) must remain visually fixed on the left or top, strictly maintaining its ****Active State**** (e.g., Bold or highlighted).

****3. One-Click SPA Routing (Next Action Flow)****

* ****Action:**** The exact moment a user clicks on their target destination city (e.g., Shanghai).

* ****Reaction:**** Utilizing flawless ****SPA (Single Page Application) routing****, the screen must bypass any harsh page reloads. Instead, a smooth transition animation must instantly display the ****[Date Picker]**** component or route the user directly to the ****[Hotel List / Booking Page]**** for that specific city.

Page 6 & 7. Exhibitions Category & Smart Calendar Guide. Honeymoon

1. Thematic Grid Layout & High-end Typography

The screen must be elegantly divided into a Grid Layout based on four major themes.

The developer must flawlessly construct a Visual Hierarchy using precise letter spacing, line height, and Font Weights to mirror a luxury brand magazine.

2. Precise Micro-Interactions

Hover Effect: When a user hovers over a specific exhibition name (e.g., Amsterdam: IBC), the UI must provide instant visual feedback (e.g., highlighting the text line or animating a rightward arrow →).

3. Event-Driven Auto-focusing & Pre-selection (Smart Calendar)

When a user clicks on a specific exhibition, the Date Picker must be rendered with an immediate Auto-focus on the specific 'Month' when the event is scheduled to take place.

The actual duration of the exhibition (e.g., Sep 13 - Sep 16) must be Pre-selected or explicitly Highlighted on the calendar.

VVIP Flexible Range Editing: The UI must allow users to intuitively extend or edit their stay (Date Range) through a seamless touch/drag interaction.

Exhibitions

Europe High-end

Amsterdam: IBC, METSTRADE
Barcelona: Mobile World Congress (MWC), ISE
Basel: Art Basel
Berlin: IFA, InnoTrans
Birmingham: Autosport International, MACH, Spring Fair
Bologna: Cosmoprof Worldwide, CERSAIE

Taipei: COMPUTEX
Tokyo: Art Fair Tokyo, Tokyo Game Show, Tokyo Motor Show

Middle East & Oceania

Abu Dhabi: ADIPEC, IDEX
Doha: Project Qatar
Dubai: Arab Health, Dubai International Boat Show, GITEX
Melbourne: Australian Auto Aftermarket Expo
Riyadh: Future Investment Initiative, LEAP
Sydney: Sydney International Boat Show

This category lists major global events and trade shows categorized by region and theme, such as Europe High-end and Americas Tech & Art.

Exhibitions

Amsterdam: IBC, METSTRADE

Hovering the mouse cursor over a city, such as Amsterdam, triggers a calendar interface for users to select their travel dates.

This category lists major global events and trade shows categorized by region and theme, such as Europe High-end and Americas Tech & Art.

Page 7. Exhibitions - Smart Calendar UX Guide

****1. Event-Driven Auto-focusing****

* When a user clicks on a specific exhibition and the Date Picker is invoked, it must ****NOT**** pointlessly render based on 'today's date'.

* Utilizing the exhibition data fetched from the Backend API, the calendar must be rendered with an immediate ****Auto-focus**** on the specific 'Month' when the event is scheduled to take place.

****2. Pre-selection & Highlight****

* The actual duration of the exhibition (e.g., Sep 13 - Sep 16) must be ****Pre-selected**** or explicitly ****Highlighted**** on the calendar using an elegant brand point color.

* ****Top Header Text Example:**** `[Amsterdam - IBC Exhibition] Sep 13 - Sep 16`

****3. VVIP Flexible Range Editing****

* While the exhibition period is set as the Default, the UI must allow users to intuitively extend or edit their stay (****Date Range****) to accommodate earlier arrivals or later departures.

* This must be achieved through a seamless touch/drag interaction on the dates immediately preceding or following the pre-highlighted period.

Page 6 & 7. Honeymoon

Honeymoon Category - UI/UX & Interaction Guide

1. 4-Column Thematic Regional Grid

The romantic destinations must be intuitively categorized into four distinct themes: Indian Ocean & Asia Romance, Pacific & Oceania Retreats, Europe Classic Romance, and Caribbean & Americas.

The data must be arranged in an elegant 4-Column Grid Layout, applying generous line height and spacing to reflect a premium, curated aesthetic.

2. Zero-Latency Hover Interaction (Instant Hotel Rendering)

Interaction: When a user hovers the mouse cursor over a specific destination (e.g., Indonesia: Bali).

Reaction: Without requiring a click or page reload, the frontend must utilize flawless state management to instantly dynamically render the 5-Star Hotel List for that specific area on the screen.

3. Luxury Hotel Card UI Component

The dynamically rendered hotel list must utilize the Luxury Card UI Component.

It must include a high-resolution thumbnail, 'Wishlist' (Heart) icon, elegant typography for the hotel name and rating, and a clean price display.

The layout must maintain generous negative space and a clean drop-shadow effect to ensure the highest visual standard for honeymooners.

Honeymoon

Indian Ocean & Asia Romance

Indonesia: Bali, Lombok, Sumba
Maldives: Belle Mare, Le Morne, North Male Atoll, South Male Atoll
Philippines: El Nido, Palawan
Seychelles: La Digue, Mahe, Praslin
Thailand: Khao Lak, Koh Samui, Krabi, Phuket
Vietnam: Da Nang, Nha Trang, Phu Quoc, Vinh Hy Bay

Europe Classic Romance

Croatia: Dubrovnik, Hvar, Split
France: French Riviera, Paris, Provence
Greece: Crete, Mykonos, Santorini, Zakynthos
Italy: Amalfi Coast, Capri, Lake Como, Portofino, Positano, Venice
Spain: Canary Islands, Ibiza, Mallorca, Tenerife
Switzerland: Interlaken, Lauterbrunnen, Lucerne

Pacific & Oceania Retreats

Australia: Gold Coast, Hamilton Island, Whitsundays
Fiji: Mamanuca Islands, Viti Levu, Yasawa Islands
French Polynesia: Bora Bora, Moorea, Tahiti, Tetiaroa
Hawaii: Honolulu, Kauai, Lanai, Maui
New Zealand: Queenstown, Rotorua, Waiheke Island

Caribbean & Americas

Antigua and Barbuda: Antigua
Bahamas: Exuma, Nassau, Paradise Island
Costa Rica: Arenal, Guanacaste
Dominican Republic: Punta Cana
Mexico: Cancun
Saint Lucia: Soufriere
Turks and Caicos: Providenciales
USA: Aspen, Key West, Miami, Napa Valley, New York

These four categories offer curated travel destinations based on specific themes and are organized by global regions

Honeymoon

Indonesia: Bali

When a user hovers the mouse cursor over a specific destination within these sections, the website immediately displays a list of available hotels in that area.

For example, hovering over Bali in the Honeymoon section, Gold Coast in the Golf section, Bagnols in the Castle section, or Baku in the Villas section will reveal hotel listings for those specific locations.

The hotel listing interface displays property cards containing the hotel image, name, review rating, distance from the city center, room type, cancellation options, and price.

Page 8 & 9. Golf Category - Mega Menu & Hotel Grid UI

1. 4-Column Grid & Country-Region Grouping

The golf destination data must strictly adhere to a 4-Column Grid Layout.

Within each region, the text must be logically grouped (Country Name: Target Region). There must be a clear visual hierarchy between the country name (Bold) and the sub-region names.

2. Zero-Latency Grid Rendering & Overlay Routing

Action: Upon clicking a target region text (e.g., St Andrews).

Reaction: Utilizing seamless SPA Routing, the 'Date Picker' component must smoothly render as an Overlay prominently displaying the region's name as its title.

3. Luxury Card UI Component

Strictly avoid cluttered layouts. Mandatory Elements: High-resolution main thumbnail, 'Wishlist' icon, Hotel name & star rating, and Price per night.

Design Mood: Maximize the luxury aesthetic by applying generous negative space and refined Drop-shadow effects. Must be a flawless Responsive Web layout.

USA: Augusta, Bandon, Kiawah Island, Las Vegas, Miami, Monterey, Orlando, Pinehurst, Scottsdale

Page 10. Castle Category - UI/UX Guide

1. Balanced Zigzag or 2x2 Split Grid Layout

Since the text volume varies significantly across regions, the layout must avoid a rigid checkerboard pattern. Implement a visually balanced Zigzag layout or a spacious 2x2 Split Grid to emphasize negative space.

2. Intuitive In-line Country-to-City Arrangement

The text structure must follow a format like France: Bagnols, Carcassonne.... The country name (Bold) is followed by target cities listed sequentially In-line.

Micro-animation: Hovering over a specific city name must trigger a luxury color transition and smooth underline effect.

Castle

Western Europe Castle

France: Bagnols, Carcassonne, Eze, Mirambeau, Montbazou, Onzain

Page 11. Villas Category - VVIP Exclusive UI Guide

1. Ultimate Luxury Category Rendering

As the highest-priced product tier, this category must establish an ultimate luxury mood by maximizing Negative Space and utilizing elegant Serif typography even more profoundly.

Apply a spacious, breathable grid division reminiscent of a fine art gallery.

2. Private Destination Pop-up (Glow Effect)

Interaction: Hovering over a specific city must trigger a high-end animation, subtly applying a soft Glow effect.

Action: Clicking the city name triggers the Date Picker component as an Overlay with a customized title (e.g., "Private Villas in Baku").

3. Villa-Exclusive Hotel Card UI (Minimalist Design)

The exposed Hotel Card Component must visually communicate that the property is a 'Private Villa / Standalone Estate'.

Increase the aspect ratio of the thumbnail image and entirely eliminate unnecessary badges or discount text. Execute a strict Minimalist Design, driving the user towards the booking button solely through the overwhelming visual quality.
